Dr. Vandana V. 276

Green Chemistry as a Tool for Environment enhancement 283

Author : Gurtej Singh. 283

Chemical products should be designed to affect their desired function while minimizing their toxicity .i.e. making safe, non toxic product is the goal. 284

A raw material or feedstock should be renewable rather than depleting whenever technically and economically practicable. 285

Catalytic reagents (as selective as possible) are superior to stoichiometric reagents. Catalysts is not only reduces energy requirement & by product formation, also, increases efficiency of the process..... 285

Chemical products should be designed so that at the end of their function they break down into innocuous degradation products and do not persist in the environment. 285

Analytical methodologies need to be further developed to allow for real-time, in-process monitoring and control prior to the formation of hazardous substances i.e the knowledge of final product w.r.t waste, time and energy. 286
